SUMMARY

Innovative and creative developer learning machine learning and data science, dedicated to building intelligent, highly automated systems from concept to deployment.

WORK EXPERIENCE

Data Analytics Intern - Learn Basics

May 2025 - July 2025

Got an in-depth insight about the real time database, optimising queries, creating dashboards in metabase for better visualization and reports automation through LaTeX

Postgresql - Metabase - Latex

Machine Learning Intern - Teachnook

Oct 2024 - Dec 2024

gained hands-on experience with Python programming, data manipulation using NumPy and Pandas, data visualization with Matplotlib, and implementing machine learning models using Scikit-Learn.

Exploratory Data Analysis - Machine Learning Models

PROJECTS

Drug Efficacy Prediction Model — XGBoost, SHAP, FastAPI, Python

- Designed and trained a machine learning model using XGBoost to accurately predict drug efficacy.
- Implemented SHAP (SHapley Additive exPlanations) to ensure model interpretability and transparent decision-making.
- Deployed the predictive model as a scalable web service using FastAPI for seamless integration

EchoForge — Python, Programmatic Automation, Media Processing, Whisper AI

- Architected an end-to-end, autonomous media generation engine that algorithmically synchronizes audio and text to render dynamic lyrical videos
- Engineered a zero-touch programmatic pipeline, entirely eliminating manual editing workflows and drastically scaling high-fidelity content production.

Aether AI — Agentic AI, Prompt Engineering, JSON

- Built an agentic AI system that converts natural language design briefs into WCAG compliant typography, color palettes, and layout tokens
- A multi-stage refinement loop (prompt → generate → evaluate → critique) where an LLM-based ReAct-style critic scores producing professional grade UI foundations for UI kits, website builders, and accessibility first design tools.

EDUCATION

2023 - present	Bachelor of Technology at Vellore Institute of Technology	(GPA: 8.48/10.0)
2023	Class 12th State Board	(94.5%)
2021	Class 10th ICSE Board	(97.5%)

PATENTS & CERTIFICATION

Patent Filed: Smart Lecture Capture and Learning System

Invented an end-to-end IoT and AI system utilizing RFID-driven ESP32 controllers to automate lecture recording, seamlessly integrated with a backend machine learning pipeline that enhances audio, generates transcriptions, and securely distributes AI-generated summaries, translations, and quizzes to students in real-time via Firebase.

Certificate: Machine Learning Specialization — DeepLearning.AI & Stanford University

Completed a rigorous 3-course machine learning series covering Supervised, Unsupervised, and Reinforcement Learning, gaining hands-on Python experience in training scalable architectures, hyperparameter tuning, managing bias-variance trade-offs, and building recommendation systems.

SKILLS

Programming Languages	Python, SQL (PostgreSQL), Java, Javascript, LaTeX.
Frameworks	TensorFlow, PyTorch, Scikit-Learn, OpenCV.
Databases	PostgreSQL, MySQL.
Core Competencies	Leadership & People Management (Outreach Head), Time Management & Workflow Consistency (Daily content creation).
